

King Kong VUK-Upgrade-Set Assembly

SKU: 10003450

Tools required:

- PH2 Phillips screwdriver
- 5/16" Socket wrench or combination wrench

Preparation:

Turn off the device and unplug it from the electrical outlet. Remove the playfield glass.

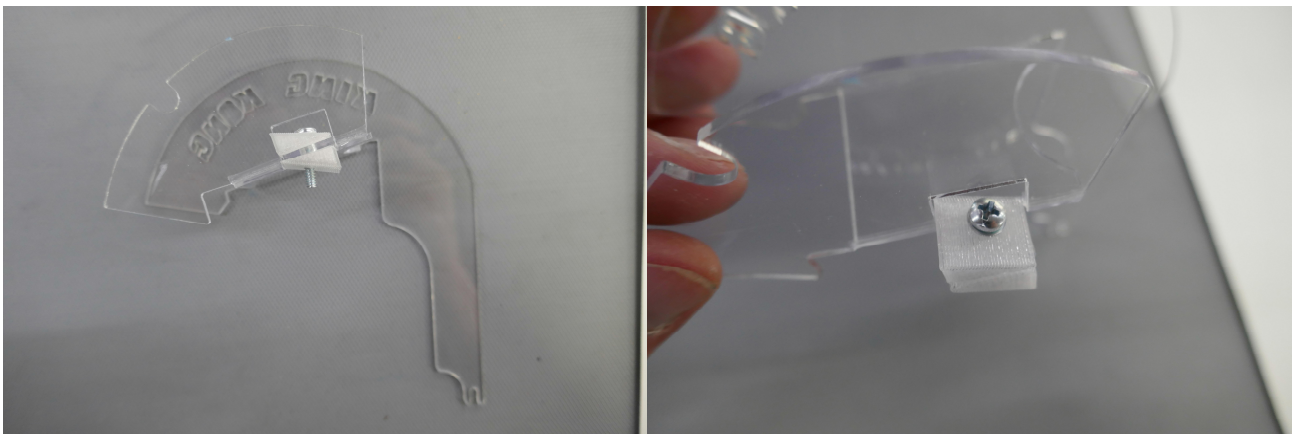

Step 1: Peel off the blue protective film

Please remove the blue protective film from the plastic.

Step 2: Install the plastic wedges and screw on the VUK plastic

The 3D-printed nylon wedges are mounted at the top and bottom of the plastic angle of the VUK plastic, so that the wedges clamp the plastic in place. The screw is inserted from above through the wedges and the plastic. Please make sure the parts are arranged correctly!

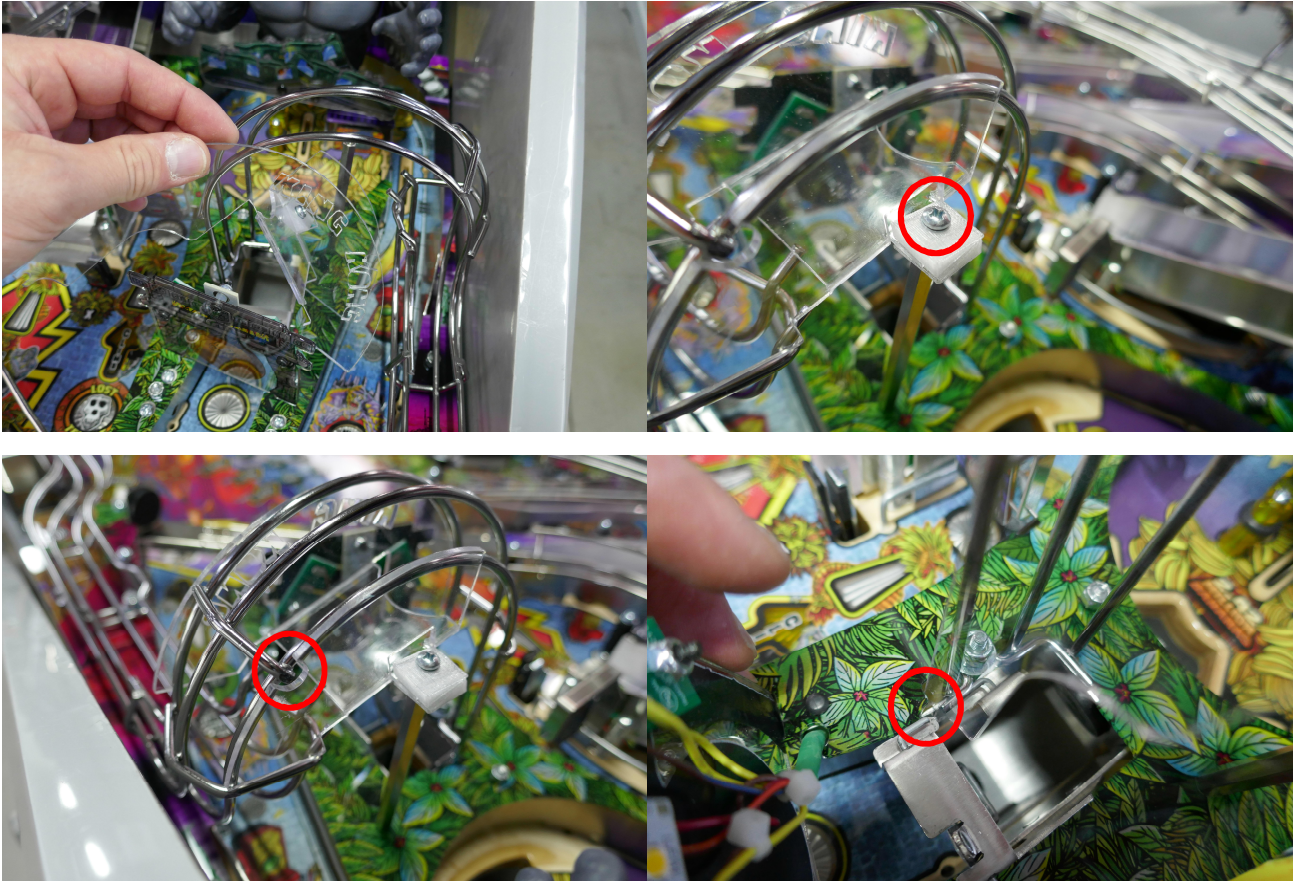

Step 3: Remove the nut and install the hex post

Remove the 5/16-inch nut behind the gong and install the 1/4-inch hex post in its place.

Step 4: Install the VUK plastic

Insert the prepared VUK plastic piece as shown in the pictures and secure it to the already installed hex post using the screw. Make sure the notches in the VUK plastic piece are properly aligned.

Once you have completed the installation, you can reinsert the playfield glass, connect the power cord, and then switch on the machine.
